

# WEFIN Staking Pools

**Simple, Secure, Superb Staking.**

IN PARTNERSHIP WITH

It is a well-known adage in crypto that “Liquidity is the elixir of any decentralized exchange. It’s the very lifeblood of an automated digital economy”.

In the world of DeFi, there are no third-party market makers like big centralized exchanges that can inject their own liquidity into the system. For trades to happen, someone must be willing to provide the more in-demand token for exchange. This automated technology lets users like yourself inject tokens in a Liquidity Pool and become a part-owner of it.

The algorithm powering the Liquidity Pool charges a fee on every transaction and then distributes the rewards to the liquidity provider. In essence, you earn dividends for helping the decentralized economy operate. Thus, making it a true passive source of income for many of our users.

Consequently, the eFIN Team is proud to announce a brand new partnership with the Ferrum Network to bring Staking Pools to our Ecosystem. We now offer Staking Pools with Liquidity Pool tokens and also Liquidity Staking as well.

We are truly pleased to offer this DeFi technology as a reward to our passionate members of the eFIN Community.

The tokens will be locked for a predetermined length of time and will be rewarded with a high-yield APR.

Community members will have the option to stake their WeFin and get rewarded but also to earn more than twice as much when putting their WeFin in the Liquidity Pool in tandem with putting their Liquidity Pool tokens into the Staking Pool provided by Ferrum Network.

Liquidity Staking takes things to the next level in a major way. Instead of locking up your tokens and earning a steady but limited stream of rewards, you can now double down on your investments and maximize your returns.

When you invest in a Liquidity Pool, you get LP tokens that serve as proof of your part-ownership within that network. Think of them like property deeds. They serve as irrefutable proof that you own a stake within that network.

But what if you could also earn rewards for holding those LP tokens?

That's exactly where Liquidity Staking comes in. This revolutionary technology has shaken up the DeFi world. With a mere stroke of smart contract genius, it is now possible to earn rewards on your LP tokens and instantly grow your ROI.

This is made possible thanks to our partnership with Ferrum Network, a tested and trusted team of blockchain experts who've set out to bring next-gen technologies to small but growing crypto ecosystems.

## The Benefits of Liquidity Staking Pools for Users

While the positive impact on the eFIN Ecosystem is definitely welcome, that's not the only reason for Liquidity Staking Pools. Users like yourself can experience an array of benefits by investing in our upcoming Liquidity Staking Pools.

### 1. Grow Your Return On Investment

Let's start with the obvious. By staking your LP tokens, you can instantly grow your ROI without significantly increasing your risk exposure.

If you ask a room of financially successful people for financial advice, the most common quote will be to make your money work for you. But what if you could make your money work for your money?

That's exactly what LP Token Staking offers. You get rewards for providing liquidity into the original pool which adds an additional layer of rewards to your investment.

### 2. Earn Competitive Returns Without the Stress of Trading

Another interesting aspect of Liquidity Staking is that you get to earn competitive ROIs without sacrificing your peace of mind.

### 3. Make an Impact on Your Favorite Token's Value

By injecting liquidity into the eFIN Ecosystem, you will help strengthen this digital economy and make a direct impact on its future. Better liquidity means a better experience for all users.

As a result, not only will you earn two layers of rewards from Liquidity Pools and Staking Pools, but you'll also help supercharge the value of the tokens that you already own.

It's a win-win for everyone within the eFIN Family!

## What Pools Will There Be?

We will start with two different pools and add a third one in due time.

For the Liquidity Staking Pools, you will need LP tokens made from WeFIN and BNB. You will need to add the same \$ value of both tokens into the Liquidity Pool.

For further information, all staking details may be found at [staking.efin.com](https://staking.efin.com)

## Ready to Start Staking Your Tokens?

Ferrum Network, our partner on this project, has an insightful video on how you can stake your LP Token or WeFIN through their platform.

## HOW TO CONNECT METAMASK TO BNB CHAIN:

(Ferrum greatly suggests to use Metamask on a PC/Mac. It should also not be a problem on a smartphone but sometimes there is a lot of corrupted data on a phone since people do not restart their phones often enough or end up installing all kinds of stuff and do not clean their phones.)
